Objective

Motivated B.Tech Computer Science Engineering student actively seeking a **Software Development Engineer (SDE) Internship**. Strong foundation in **Data Structures, Algorithms, Java back-end development, and REST API design**, with hands-on experience through industry-relevant projects.

Education

Kalinga Institute of Industrial Technology (KIIT), Bhubaneshwar	2023 – 2027
Bachelor of Technology in Computer Science Engineering CGPA: 8.61 / 10.00	
Carmel Junior College, Jamshedpur	2022 – 2023
Class XII (ISC) : 92.25%	
Carmel Junior College, Jamshedpur	2020 – 2021
Class X (ICSE) : 92.00%	

Projects

Expense Tracker – Java Full Stack Application

- Created a thorough framework for tracking expenses that lets users log, classify, and examine every day's spending.
- Implemented secure **RESTful APIs** supporting CRUD operations with secured data for expense management.
- Designed intelligent modules for **category - wise tracking** and flexible **date - range filtering**.
- Integrated **MySQL database** using **JPA/ Hibernate ORM** ensuring efficient, persistence query handling.
- Added **JWT authentication**, validations, and global exception handling to enhance application security.
- Conducted end-to-end API testing using **Postman** verifying all the functionalities and request handling.
- Kept up systematic version control using **GitHub** and **Git**, allowing for effective project management and tracking.

Notification System – Java Backend

- Built a highly scalable notification management backend using **Java** and **Spring Boot** to handle users effectively.
- Developed a secured and well-structured APIs to send, store, and retrieve notifications across application.
- Implemented efficient **read/unread status tracking** allowing users to manage and monitor notifications.
- Simulated multi-channel notifications: **In-App, Email, SMS** notification for diverse user engagement.
- Used **MySQL with JPA and Hibernate** to ensure reliable persistent storage and optimized retrieval of data.
- Applied **asynchronous processing techniques** to improve performance and enable non-blocking notification.
- Version controlled the entire service using **Git** and **GitHub** to maintain an organized codebase management.

Student Management System

- Developed a Student Management System to manage student records including add, update, delete, and view operations.
- Implemented backend logic using **Java** with proper **Object-Oriented Design** principles.
- Integrated **MySQL database** for persistent data storage using **JDBC**.
- Designed a simple console/GUI based interface for smooth user interaction.

Technical Skills

Languages: C, C++, Java, Python, SQL

Technologies: Spring Boot, React, Mongo DB, MySQL, REST APIs

Concepts: Object Oriented Programming, Microservices Architecture, JWT Authentication

Core CS Subjects: Data Structures, DBMS, Operating Systems, Computer Networks

Tools: Git, Git Hub, Postman, VS Code

Achievements

- Solved **450+ Data Structures & Algorithms problems** across platforms like **LeetCode, Geeks For Geeks (GFG), and Coding Ninjas** and Strong focus on **optimized problem - solving and complexity analysis**.
- Achieved **CodeChef rating above 1000** demonstrating consistent improvement and strong logical thinking.
